

TRUSTING SCIENCE IN AN AGE OF DISTRUST

Results and implications
from public surveys on science in Europe

INVITATION

22 November 2017, Brussels

In the light of current public debates about fake news and anti-expertism, survey results offer valuable insights into public perceptions of science. Where do people get in touch with or feel affected by science? Which parts of society are in favour of science and which oppose research? And which scientific disciplines and research fields are especially distrusted by people?

Based on results of different science surveys in Europe, we will discuss how to build trust in science as well as which implications can be derived for science policy and science communication on a European level.

Venue: Palais des Académies, Rue Ducale/Hertogstraat 1, 1000 Bruxelles, Room: Rubens Auditorium

AGENDA

- 18.00 Arrival and Apéro
- 18.45 Impulse talk by **Prof Martin Bauer**, London School of Economics
- 19.00 Panel I: What do people think about science? Results from surveys in Europe
