Information boxes: text by Directorate General for Enterprise and Industry in cooperation with the European Space Agency

# CONTENT

This is what you can learn with Elena in the 'space' of one day!

04:30 ATOMIC CLOCKS

06:30 WEATHER FORECASTS

07:00 OIL SLICKS

07:30 AUTOMATED CARS

07:45 TRAFFIC JAMS

08:00 POLLUTION

08:50 RENEWABLE ENERGY

09:00 NATURAL DISASTERS

09:05 RESCUE OPERATIONS

10:00 AVIATION SAFETY

10:05 REMOTE MEDICAL ASSISTANCE

12:00 COMMUNICABLE DISEASES

13:00 AGRICULTURE

13:15 ROCKETS

14:30 ENVIRONMENT AND CLIMATE CHANGE

15:30 HUMAN RELATIONS

17:30 ICEBERGS

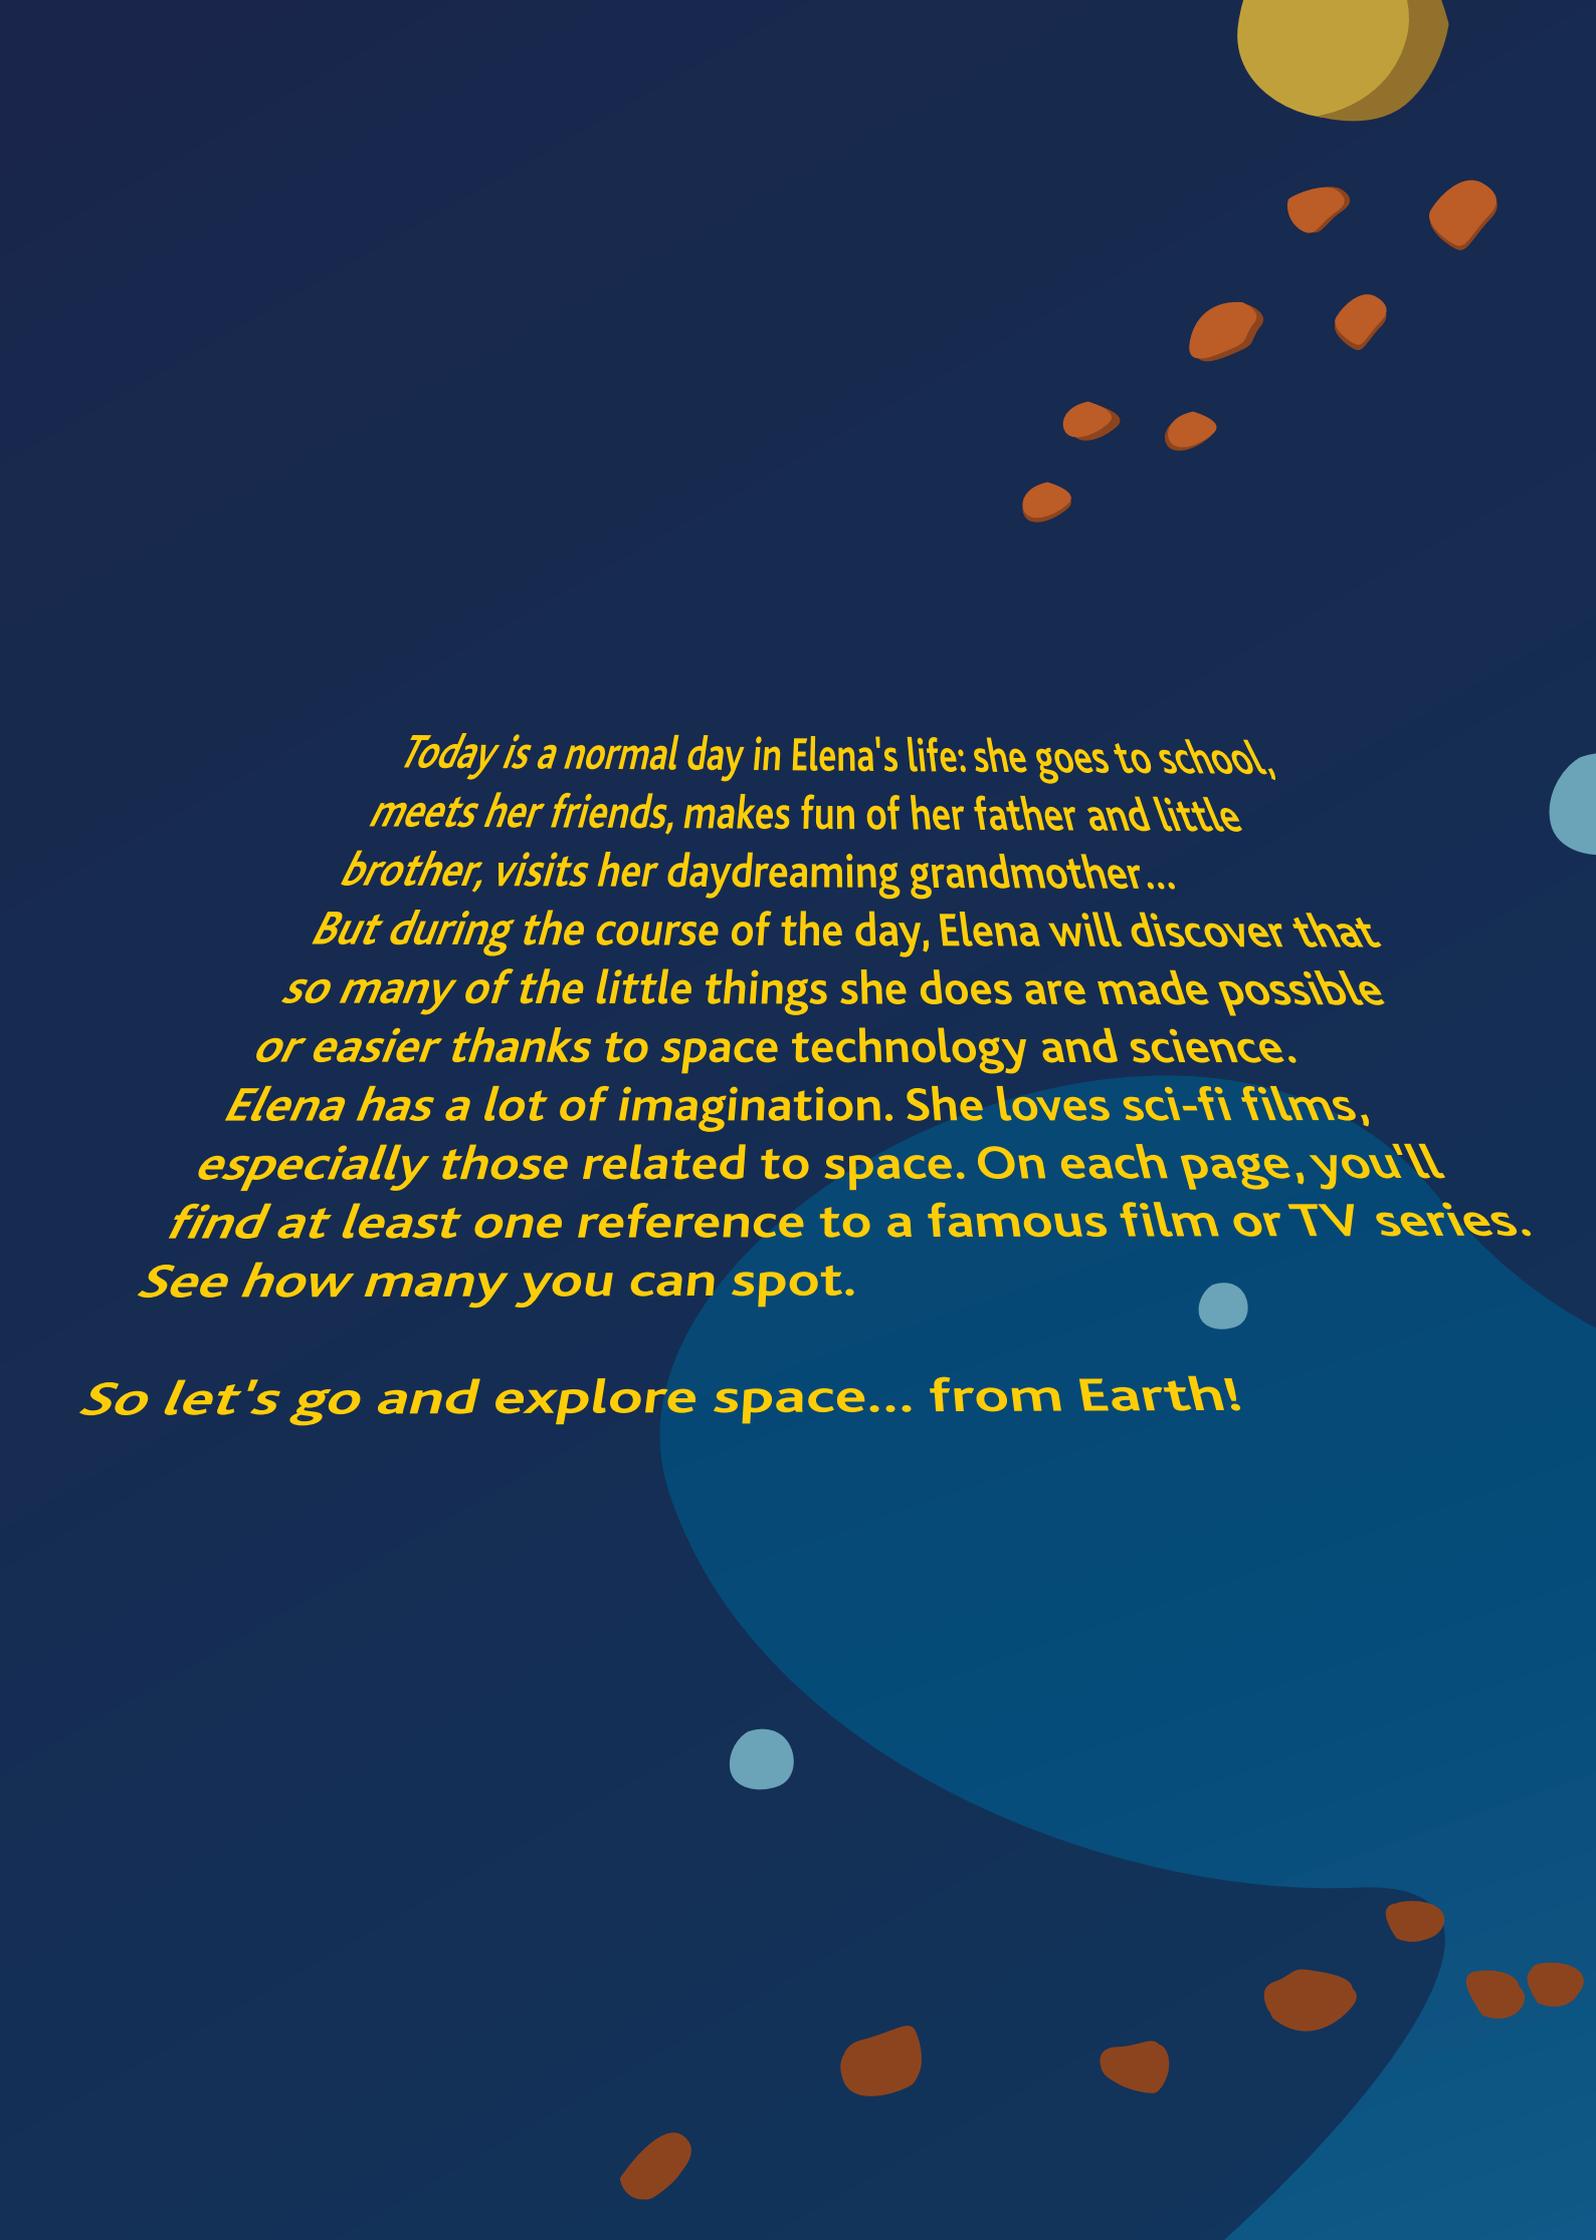

17:45 HEALTH & AGING

19:00 SPORT

20:00 DINOSAURS

21:00 COMMUNICATIONS

22:30 LOOKING AT THE EARTH

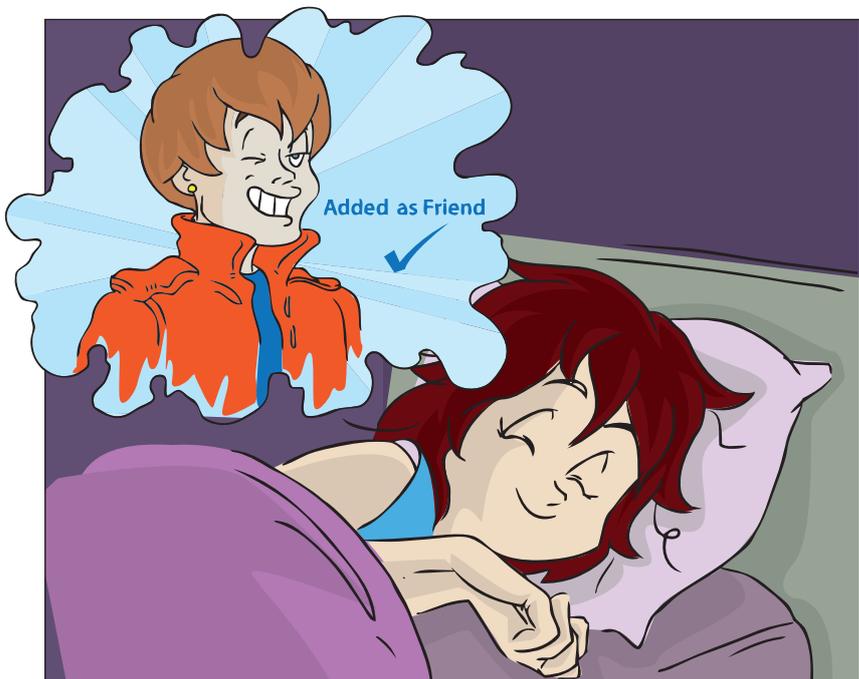

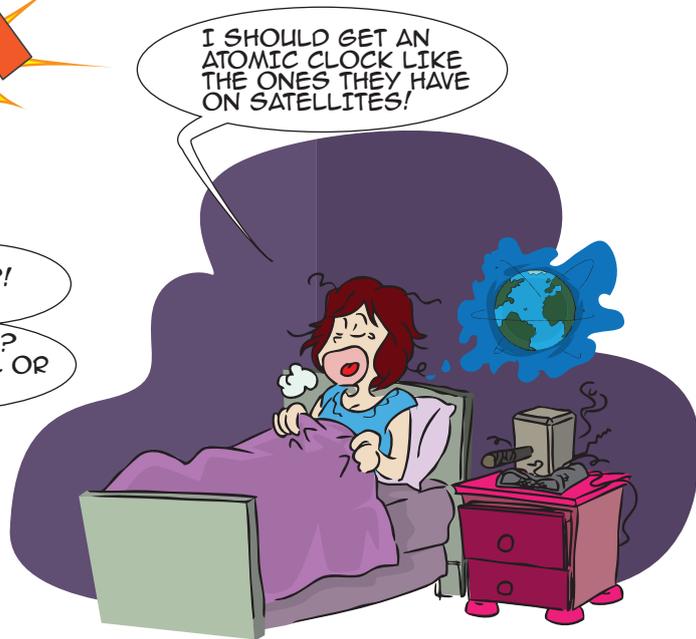

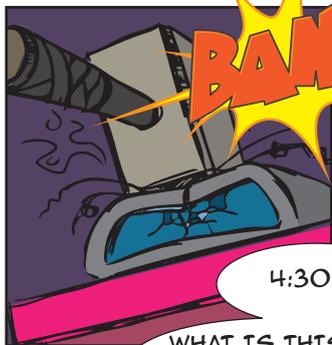

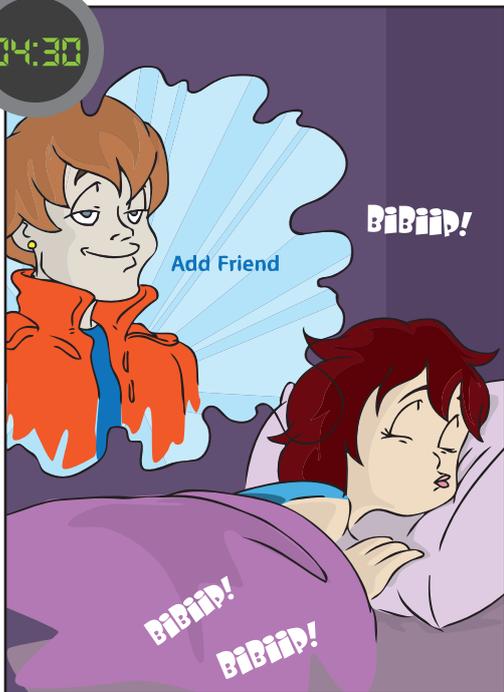

*Today is a normal day in Elena's life: she goes to school, meets her friends, makes fun of her father and little brother, visits her daydreaming grandmother...*

*But during the course of the day, Elena will discover that so many of the little things she does are made possible or easier thanks to space technology and science.*

*Elena has a lot of imagination. She loves sci-fi films, especially those related to space. On each page, you'll find at least one reference to a famous film or TV series. See how many you can spot.*

*So let's go and explore space... from Earth!*

### Did you know?

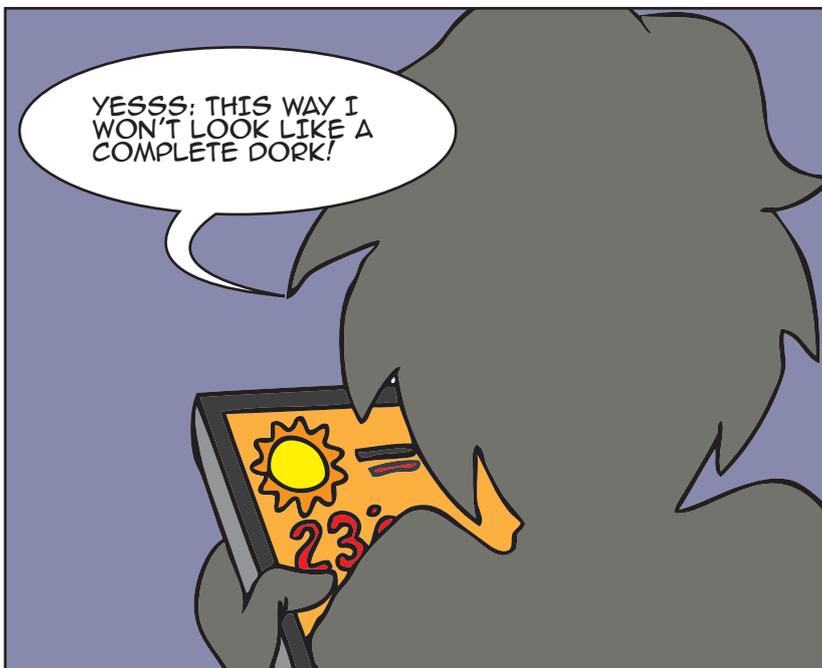

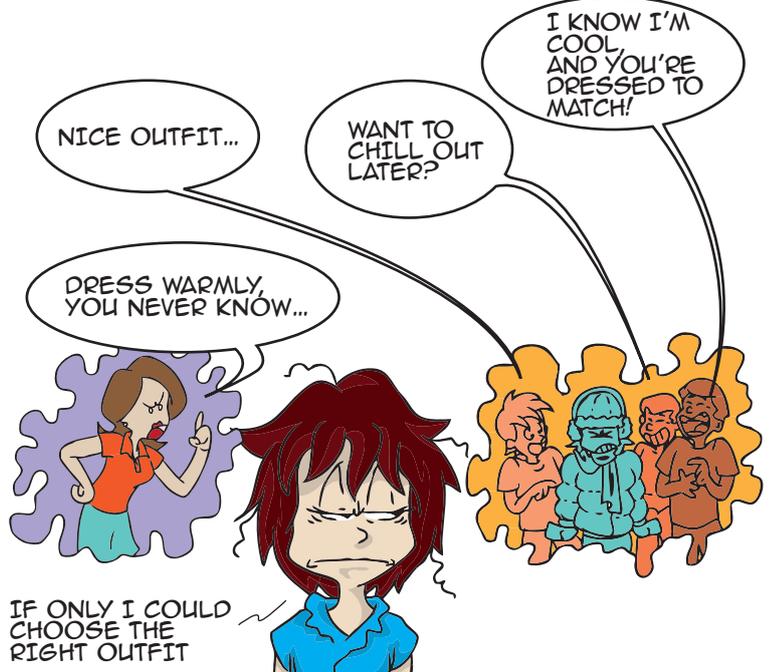

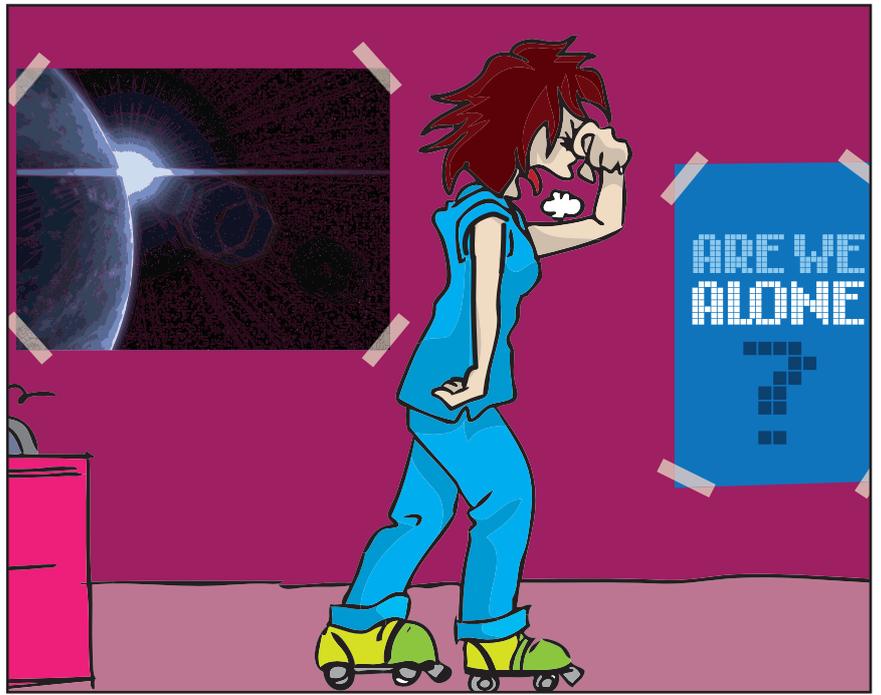

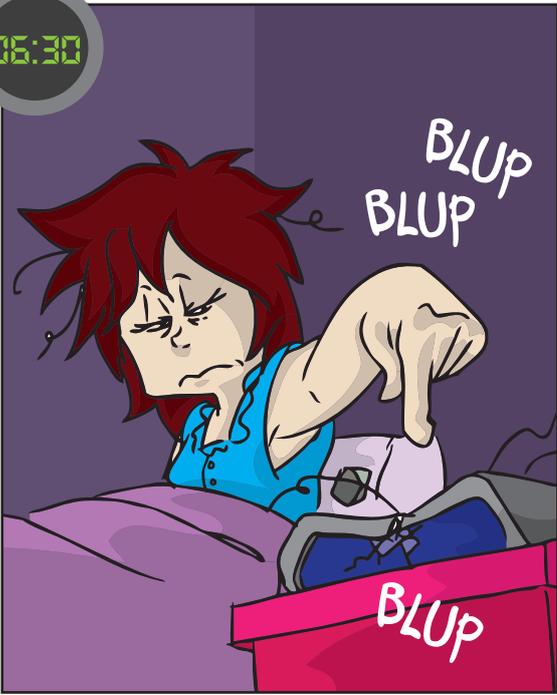

Atomic clocks in Galileo satellites are accurate to within one second in three million years. Such precision is needed so that signals from the satellites are sent out at the same time. The satellites can then get position accuracy down to a few centimetres on the Earth's surface, despite being at an altitude of 23,000km.

The more satellites are in sight, the better the accuracy. An error of only a few nanoseconds (billionths of a second) in Galileo measurements would produce an error of several metres in our position on Earth!

### What are we doing?

The Galileo programme of the European Union (EU) will have up to 30 satellites in orbit by 2018. Engineers at the European Space Agency (ESA) are the architects of this project and oversee its deployment.

06:30

**Fantastic!**

To help us predict the weather many days in advance, millions of measurements (temperature, wind, and many more parameters) are taken both on the ground and from satellites.

Meteorological satellites must be in geostationary orbit at 36,000km, so that they always remain above the same spot.

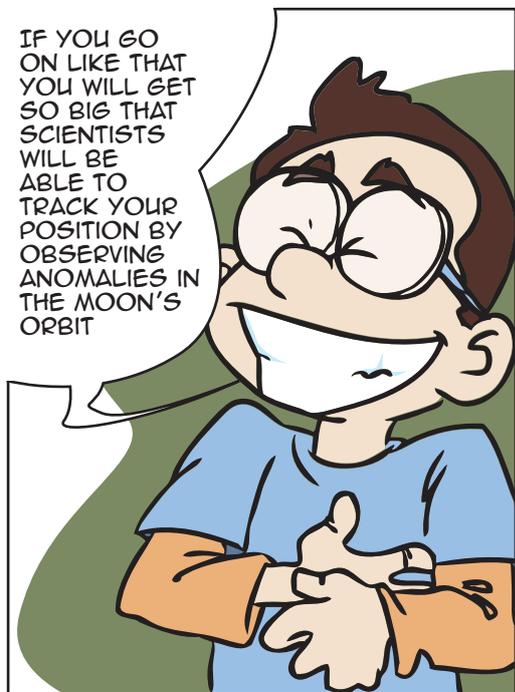

The weather is not only important for us to know what clothes to wear. Every time a plane leaves an airport, it needs to know what the weather will be like on the way. The same is true of ships, to warn them if a heavy storm is approaching. Farmers also need to know if they can expect good weather to harvest their crops.

**What are we doing?**

The European Organisation for the Exploitation of Meteorological Satellites (EUMETSAT) uses meteorological satellites to deliver the most accurate information.

YOU SHOULD REALLY WATCH WHAT YOU EAT, DAD

IF YOU GO ON LIKE THAT YOU WILL GET SO BIG THAT SCIENTISTS WILL BE ABLE TO TRACK YOUR POSITION BY OBSERVING ANOMALIES IN THE MOON'S ORBIT

YOU'RE SUCH A NERD

AND YOU'RE SO UGLY, THE ONLY THING ATTRACTED TO YOU IS THE EARTH'S GRAVITY

CHILDREN, PLEASE!

WHAT ARE YOU READING, DEAR?

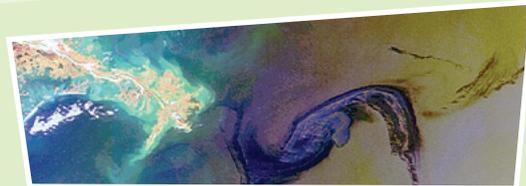

A STORY ON SEA BIRDS GETTING CAUGHT IN OIL SLICKS. IT'S HORRIBLE! HOW CAN WE LET THIS HAPPEN?

WE DON'T ACTUALLY

THANKS TO SATELLITES, WE CAN NOW CATCH THE CULPRITS

**Fantastic!**

The highest resolution of a civilian Earth observation satellite at 700km altitude is 34cm. Onboard cameras are so precise that if you used them from the top of the Eiffel Tower in Paris, you could see a silhouette of a person in Berlin.

**What are we doing?**

European satellites contribute to detecting ships at sea in order to rescue them, identify drug smuggling, and protect them from pirates.

Satellites can also help in case of a flood, and to locate oil slicks polluting the sea and find the ship they came from.

07:30

WHAT IS WRONG WITH THESE PEOPLE?

WHAT PART OF 'THE LIGHT IS RED' WAS SO HARD TO UNDERSTAND?

VROOM

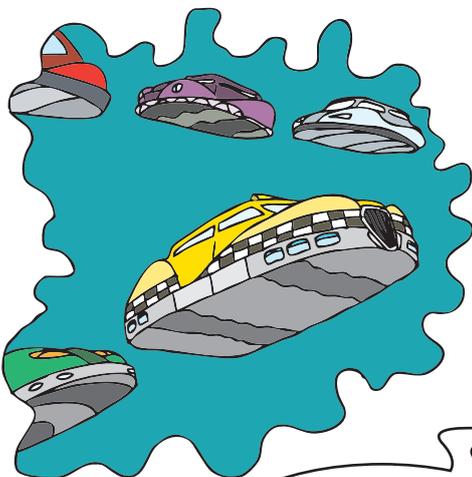

I THINK MOST PEOPLE ARE SIMPLY TOO STUPID TO DRIVE

EXACTLY! MAYBE IT'S BEST IF WE DIDN'T HAVE CARS IN TOWN AT ALL

WE COULD USE A LITTLE CLEAN-UP FROM ALIEN FRIENDS

THAT MIGHT BE A BIT EXTREME. MAYBE WE CAN JUST HAVE INTELLIGENT CARS THAT DON'T NEED A DRIVER

### Fantastic!

You will see automated cars in the not-so-distant future. They will be part of an 'intelligent transport system' developed thanks to remote-sensing, telecommunication and navigation satellites.

ESA will land its own 'astromobile' on Mars in 2019 and drive it remotely from Earth!

### What are we doing?

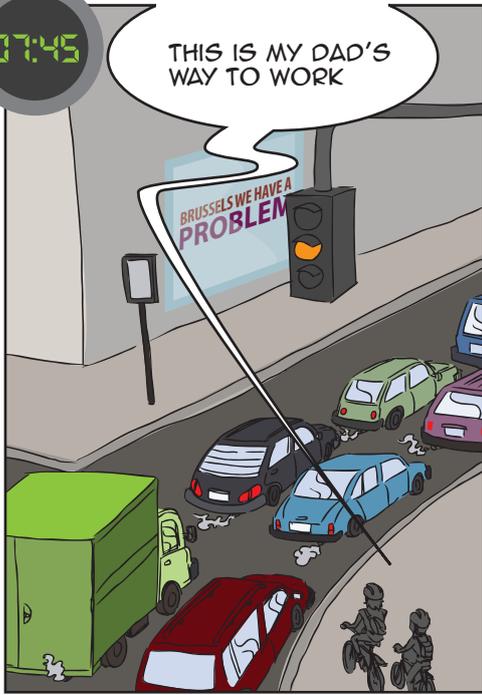

Steering ESA's ExoMars 'astromobile', called a rover, in real time by remote control from the ground is not possible. Radio signals can take up to 14 minutes to get to Mars. However, using a stereoscopic camera and onboard computer instruments, we simply need to tell the 'astromobile' where to go and it will drive there by itself, cleverly avoiding obstacles such as rocks.

The rover will drill small holes to search for signs of past or present life. Mars is a promising target because it is known to have contained large amounts of surface water in the past, which is a very important ingredient of life as we know it. Because Mars has almost no atmosphere to protect it from the radiation of the Sun or cosmos, we will need to drill at least 1.5 metres deep to find any possible current or ancient life forms.

07:45

THIS IS MY DAD'S WAY TO WORK

BRUSSELS WE HAVE A PROBLEM

HE'S GOING TO GET SOOOO STUCK

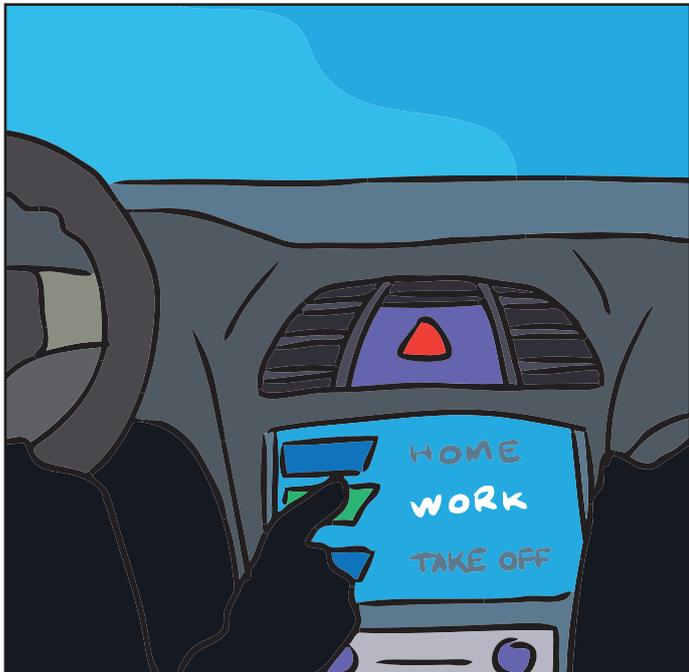

HE'LL HAVE PLENTY OF TIME TO PICK HIS NOSE

IS THAT YOUR DAD?

WOW, IT IS HIM!

IT LOOKS LIKE HE FOUND A WAY TO AVOID THE TRAFFIC!

JUST IN TIME FOR HIS MORNING CHAT ABOUT FOOTBALL

Did you know?

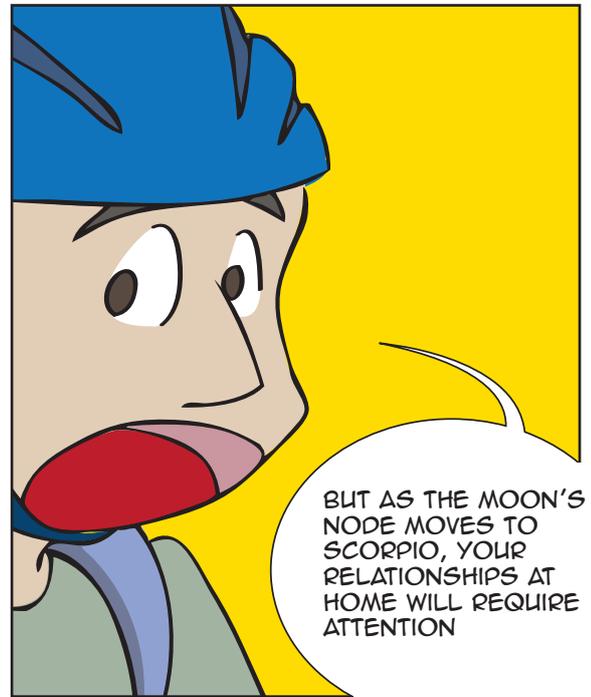

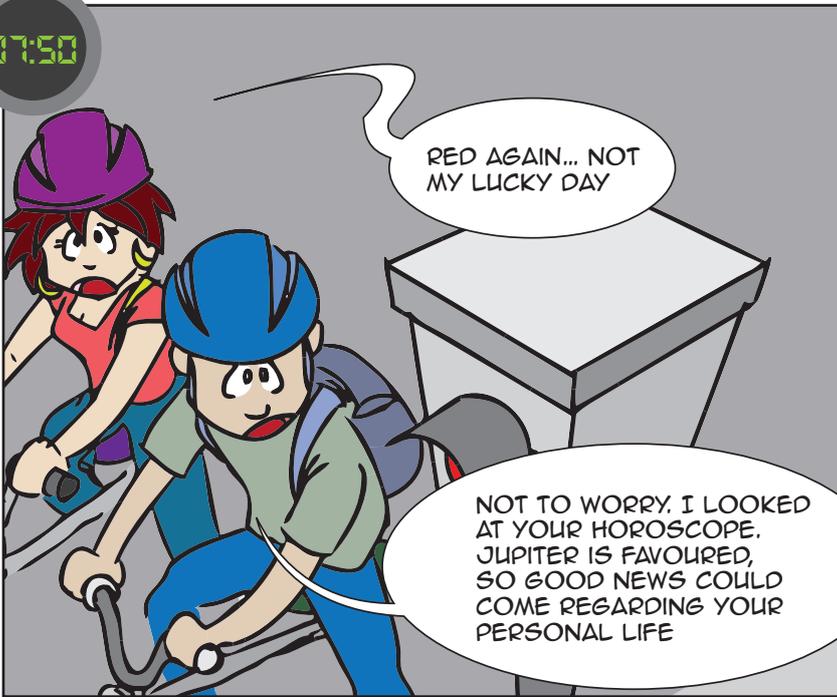

A high level of positioning accuracy via satellites is vital to ensure a reliable modern transport sector, be it cars, trucks, planes or ships. It helps prevent collisions, enforce speed limits, assist with delicate manoeuvres and locate shipment containers.

If you want to guarantee a non-stop service all year round, day and night, you need many satellites. This is why we talk about a global navigation satellite system.

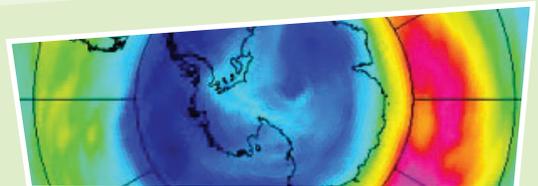

What are we doing?

Galileo is Europe's own high-accuracy global navigation satellite system. Galileo satellites and numerous ground stations are being developed in collaborative efforts between the EU and ESA. The first Galileo satellites were launched in 2011 on a Russian Soyuz rocket from French Guiana.

07:50

I KNOW, IT'S REALLY GETTING WORSE. NEXT THING YOU KNOW, WE MIGHT HAVE TO EMIGRATE TO ANOTHER PLANET LIKE IN THAT SERIES ON TV

**Amazing!**

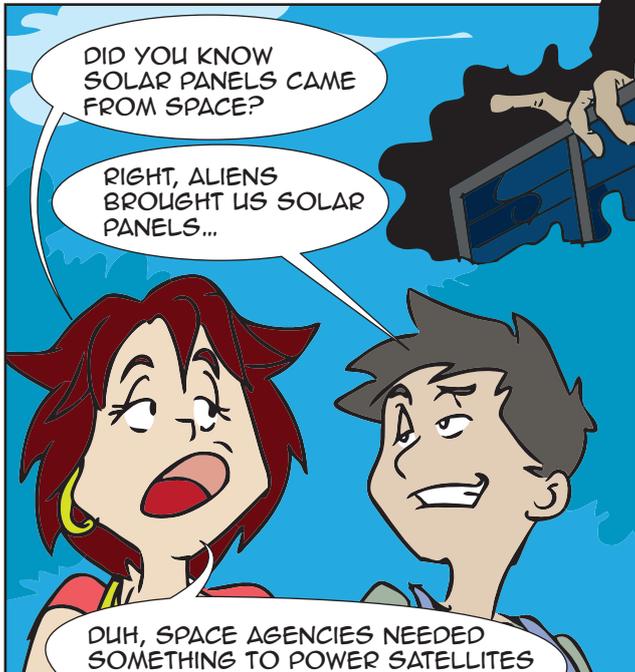

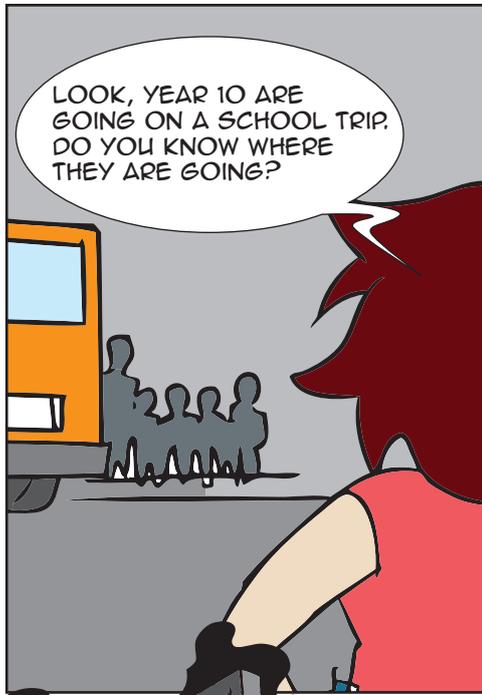

If you live in an urban area, your life expectancy is reduced by almost two years due to air pollution.

Satellites are able to determine concentrations of pollutants in the atmosphere, like ozone (O<sub>3</sub>) from heat waves, sulphur dioxide (SO<sub>2</sub>) from industry, nitric oxide (NO<sub>2</sub>) and small particles from car exhausts.

By the way, ozone high up in the atmosphere is something very useful to protect us from UV radiation.

**What are we doing?**

European satellites are able to measure a wide range of gases to help us better understand what is in the air we breathe.

**Did you know?**

The International Space Station gets all its energy from the Sun by using solar panels. These solar panels permanently support six astronauts, life-support systems and all kinds of experiments.

**What are we doing?**

European engineers are constantly trying to increase the performance of solar panels by making them more efficient and lighter. Earth observation allows us to find the best spots for solar and wind farms.

TODAY WE WILL TALK ABOUT EARTHQUAKES AND TECTONIC PLATES

HOW EXCITING

HEY!

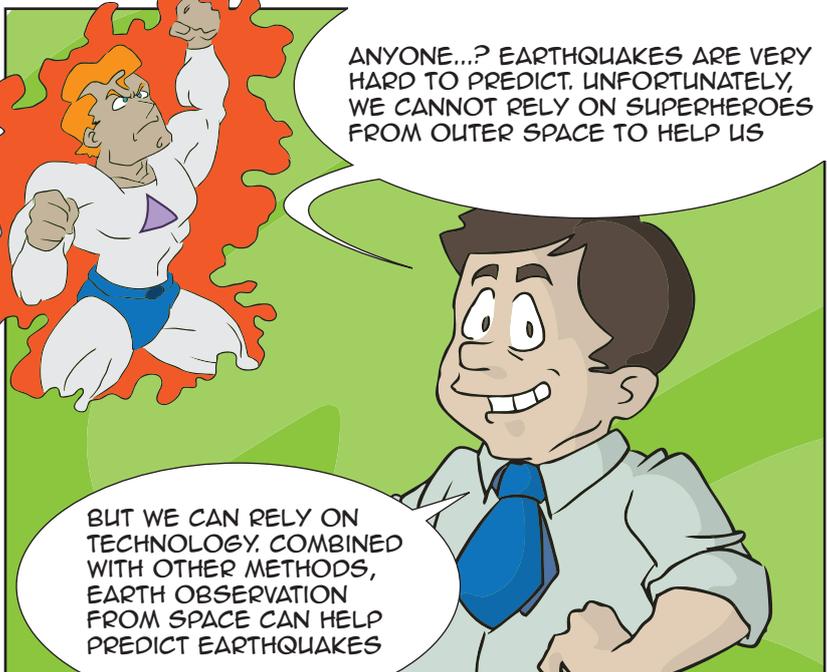

WHO CAN TELL ME IF WE CAN PREDICT EARTHQUAKES?

HUH?

WAKE UP SPACE CADET!

ANYONE...? EARTHQUAKES ARE VERY HARD TO PREDICT. UNFORTUNATELY, WE CANNOT RELY ON SUPERHEROES FROM OUTER SPACE TO HELP US

BUT WE CAN RELY ON TECHNOLOGY. COMBINED WITH OTHER METHODS, EARTH OBSERVATION FROM SPACE CAN HELP PREDICT EARTHQUAKES

Did you know?

The accuracy of land movements measured by satellite imagery is precise to within a few millimetres. You can even see a volcano 'breathing' by the expansion and retraction resulting from its state of activity.

What are we doing?

Earth observation satellites (from ESA and the EU) are crucial to predict or assess the risk of catastrophic events such as floods, storms, earthquakes, landslides and volcanic eruptions.

UNFORTUNATELY, EARTHQUAKES AND OTHER NATURAL DISASTERS DO HAPPEN...

NATURAL DISASTERS LIKE HIS HAIRDO

...AND THEIR EFFECTS CAN BE DEVASTATING. HOWEVER, TECHNOLOGY FROM SPACE GIVES EMERGENCY SERVICES A HAND

MR SMITH, DO YOU MEAN THAT FRIENDLY ALIENS COME AND HELP US ?

BE SERIOUS! I MEANT RESCUE EFFORTS RELY ON SATELLITE PHONES TO COMMUNICATE, EARTH OBSERVATION TO PROVIDE THEM WITH INFORMATION ON THE EXTENT OF THE DAMAGE, AND SATELLITE NAVIGATION TO FIND THEIR WAY AROUND

WHY CAN'T THEY JUST USE THEIR SMARTPHONES?

WELL, BECAUSE INFRASTRUCTURE IS OFTEN HEAVILY DAMAGED AFTER AN EARTHQUAKE SO YOUR SMARTPHONE WOULD NOT WORK

**Did you know?**

Following a catastrophic event like a severe flood or tsunami, only satellites can immediately replace destroyed ground-based communication infrastructures. Satellites can see if a road is still acceptable to drive on and can identify areas where aid agencies can build refugee camps and land helicopters.

**What are we doing?**

Satellites for earth observation, telecommunication and navigation help to assess damage and plan as well as guide rescue operations. The EU and many space agencies give their data to rescue teams free of charge and help in generating maps. In the future, new satellites will be built that will deliver even better and more accurate information. The EU is the world's largest contributor of foreign aid.

INCOMING SMS

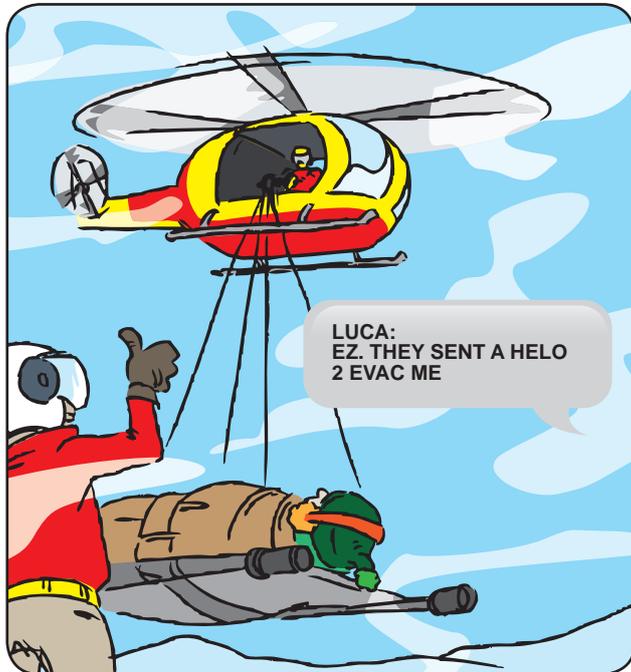

LUCA!

LUCA:  
WILL NOT B IN 2DAY. AM  
IN HOSPITAL IN ALPS  
ATM

ELENA:  
OMG. WHAT HAPPENED?

LUCA:  
WAS SKIING ON MEAN  
BLACK SLOPE WITH MY  
M8 CARLOS & I FELL

ELENA:  
R U OK?

LUCA:  
EZ. THEY SENT A HELO  
2 EVAC ME

LUCA:  
BCOZ OF FOG I  
THOUGHT WE COULD  
NVR LAND. BUT PILOT  
TOLD ME NOT 2  
WORRY: THEY  
HAVE THIS COOL  
TECHNOLOGY 2  
HELP THEM LAND  
ANYWHERE

ELENA:  
:-O

LUCA:  
L8R WE LANDED ON  
ROOF OF HOSPITAL

ELENA:  
COOL

LUCA:  
1CE I GOT 2C DOC HE  
SAID FRACTURE ON MY  
RIGHT SHOULDER WAS V  
COMPLICATED

ELENA:  
OH NO. JSTCLME

### Did you know?

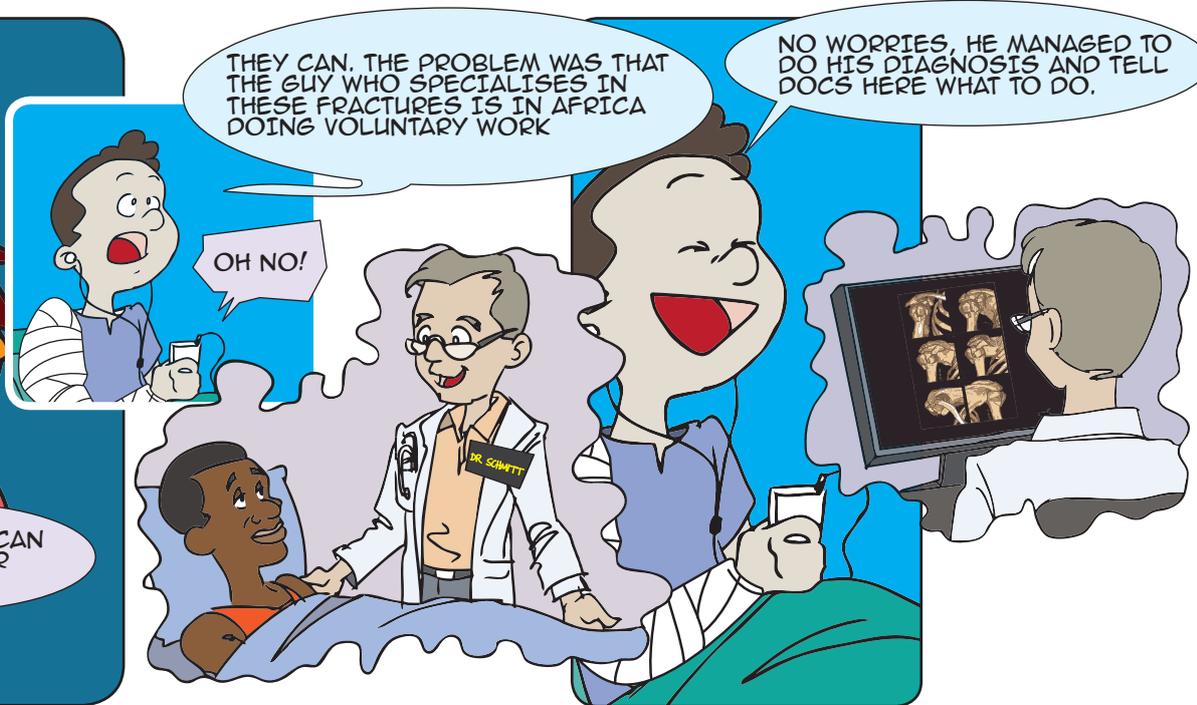

The first commercial plane landing assisted by a satellite took place in southern France in 2011. Nowadays, pilots can land planes regardless of weather conditions thanks to permanent and reliable measurements coming from satellites.

### What are we doing?

The European Geostationary Navigation Overlay System (EGNOS) is constantly looking to improve the accuracy and integrity of Global Positioning System (GPS) signals across Europe. EGNOS is composed of a network of ground stations and three geostationary satellites. EGNOS makes GPS much more accurate and reliable and therefore suitable for critical safety applications such as flying aircraft or navigating ships through narrow channels.

HI LUCA, SO, CAN THEY FIX YOUR SHOULDER?

OH NO!

THEY CAN. THE PROBLEM WAS THAT THE GUY WHO SPECIALISES IN THESE FRACTURES IS IN AFRICA DOING VOLUNTARY WORK

NO WORRIES, HE MANAGED TO DO HIS DIAGNOSIS AND TELL DOCS HERE WHAT TO DO.

HOW? DID THEY TELEPORT HIM BACK TO THE HOSPITAL?

MUCH COOLER ACTUALLY. THEY COMMUNICATED VIA SATELLITE AND HE DID THE DIAGNOSIS REMOTELY

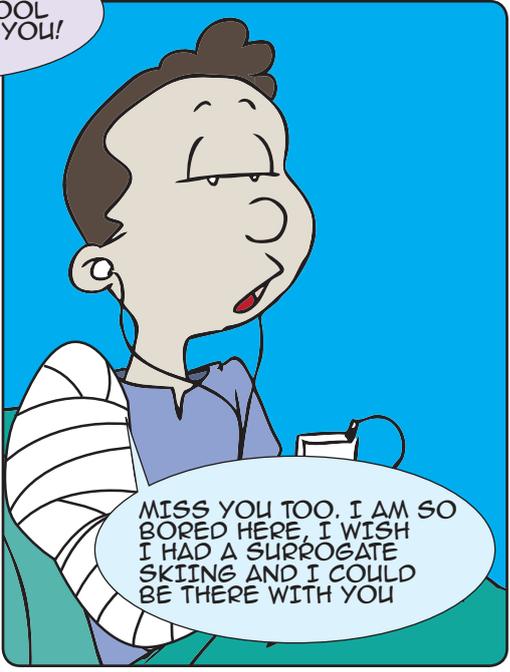

LIKE IN THAT FILM WITH THE ALIEN SIGNAL AND THE WEIRD BILLIONAIRE?

NOTHING THAT EXCITING. APPARENTLY IT'S STANDARD PROCEDURE THESE DAYS

HOPE TO SEE YOU BACK AT SCHOOL SOON. MISS YOU!

MISS YOU TOO. I AM SO BORED HERE, I WISH I HAD A SURROGATE SKIN AND I COULD BE THERE WITH YOU

Did you know?

Satellite telecommunications and technologies used to support astronauts during space flight can also help to improve healthcare here on Earth.

What are we doing?

ESA has already supported over 150 health projects. Examples include advanced diagnosis and treatment devices, remotely-controlled-surgery, and robotic-assisted echography.

The main benefits are the reduction of unnecessary travel for doctors and patients as well as better access to quality healthcare.

HI ELENA!

HI MR JONES!

HAVE YOU TALKED TO YOUR PARENTS ABOUT THE PROJECT WE DISCUSSED IN CLASS?

THE SCHOOL RECONSTRUCTION PROJECT IN ZAMBIA?

I WANT TO GO BUT MY PARENTS ARE SUCH WIMPS. THEY EVEN WORRY ABOUT ALIEN FUNGUS BECAUSE THEY SAW A SCIENCE FICTION MOVIE A FEW YEARS AGO. THEY THINK I'LL GET BITTEN BY A SNAKE, POISONED BY A SCORPION, EATEN BY A LION OR EVEN CATCH MALARIA

I'M NOT SO WORRIED ABOUT THE LIONS BUT I MUST ADMIT MALARIA SCARES ME A BIT

THEY ARE RIGHT ABOUT MALARIA THOUGH, IT CAN BE A VERY DANGEROUS DISEASE

IS THERE ANYTHING THAT CAN BE DONE ABOUT IT?

IT CAN'T BE FULLY CURED YET BUT YOU CAN TAKE PRECAUTIONS TO PREVENT GETTING IT IN THE FIRST PLACE, LIKE MOSQUITO NETS, INSECT REPELLENTS AND PREVENTIVE MEDICINE

I HEARD THEY EVEN PRODUCE SATELLITE MAPS WITH RISK AREAS TO BE AVOIDED

COOL, THIS MIGHT JUST CONVINCE MY PARENTS

#### Did you know?

Remote-sensing satellites and navigation satellites combined with other local information can help identify the source and predict the spread of some diseases. For example, mosquitoes that spread malaria or other dangerous diseases need warm water to lay eggs. Satellites can detect water and measure the temperature to help locate breeding grounds.

#### What are we doing?

Satellite data are used to support these development efforts and give countries access to information that contributes to setting up warning systems for diseases. European satellites also help to produce risk maps for malaria and other communicable diseases.

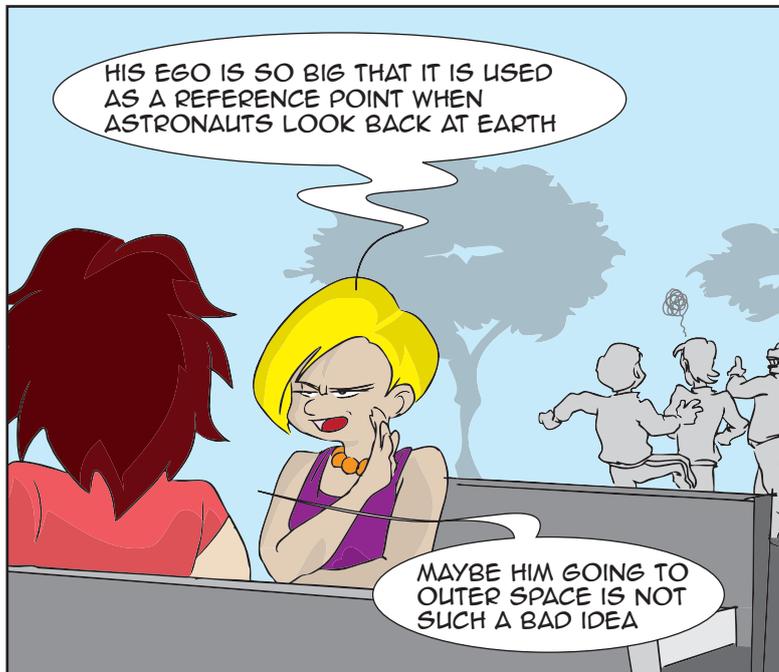

Europe supports projects to ensure that water is safe to drink and that there is enough water available for urban development.

ARE THOSE SPACE TROUSERS? BECAUSE YOUR BOTTOM IS OUT OF THIS WORLD

THANKS DUDE, DON'T YOU HAVE SOMEWHERE ELSE TO BE? PREFERABLY NOT ON THIS PLANET...

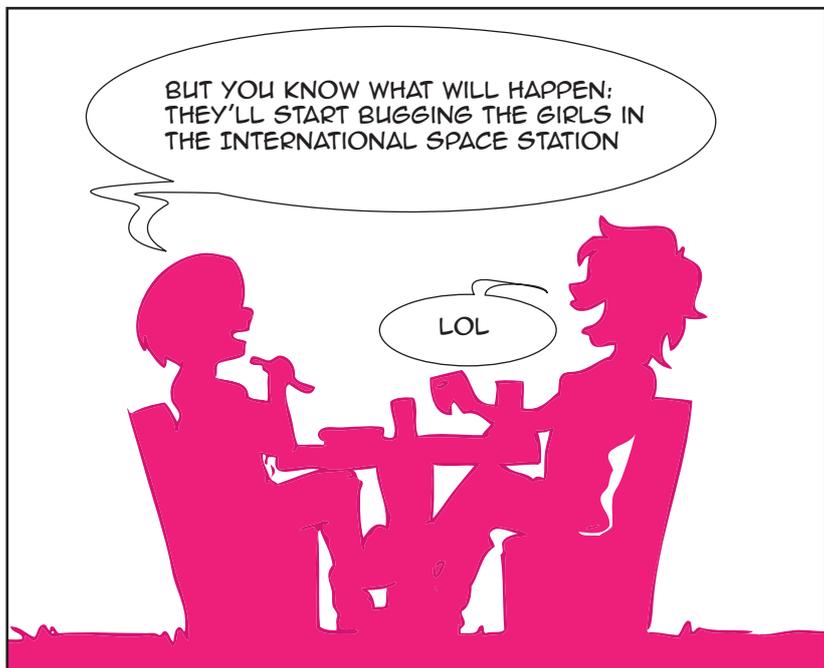

HIS EGO IS SO BIG THAT IT IS USED AS A REFERENCE POINT WHEN ASTRONAUTS LOOK BACK AT EARTH

MAYBE HIM GOING TO OUTER SPACE IS NOT SUCH A BAD IDEA

WE CAN USE A ROCKET BIG ENOUGH TO PACK HIM AND HIS MATES IN A BUS AND SHOOT IT INTO ORBIT

BUT YOU KNOW WHAT WILL HAPPEN: THEY'LL START BUGGING THE GIRLS IN THE INTERNATIONAL SPACE STATION

LOL

### Did you know?

Europe has a spaceport in Kourou in French Guiana near the equator in South America. The Ariane 5 launcher has a total mass of about 770 tonnes. Only 1% of this mass is the satellite payload, but it could easily send a school bus to the International Space Station!

More than 300 satellites have been launched from Europe's spaceport.

### What are we doing?

ESA developed the Ariane 5 heavy launcher and also a smaller launcher called Vega. The Russian Soyuz rocket lifted off for the first time from Europe's spaceport in French Guiana on 21 October 2011, carrying the first operational Galileo satellites.

14:30

ELENA WILL GIVE A PRESENTATION ON SOME OF THE ENVIRONMENTAL ISSUES OUR PLANET IS FACING

MORE THAN HALF THE ANIMAL AND PLANT SPECIES LIVE IN THE TROPICAL RAINFOREST

EXPERTS ESTIMATE THAT WE ARE LOSING OVER A HUNDRED SPECIES EVERY DAY BECAUSE OF DEFORESTATION

DOESN'T IT GET TOO CROWDED?

SO WE'RE DOING SOMETHING TO OUR FOREST LIKE IN THAT MOVIE WITH THE BLUE ALIENS?

YEAH, BUT THEY SAY THEY COULD BE CONSUMED IN 40 YEARS. EVEN WITH THE AMOUNT OF FAST FOOD YOU EAT YOU WOULD STILL BE THERE WHEN THAT HAPPENS

CAN'T THEY JUST TELL PEOPLE NOT TO CUT DOWN THE TREES?

IT'S NOT THAT SIMPLE. QUITE OFTEN TREES ARE BEING CUT DOWN ILLEGALLY AND THESE AREAS ARE VERY HARD TO ACCESS. SO NOW WE'RE USING SATELLITES TO TRACK DEFORESTATION

SORT OF

BUT THE FORESTS ARE PRETTY BIG, RIGHT?

MY UNCLE FERNANDO WORKS FOR THE EUROPEAN SPACE AGENCY AND HAS TOLD ME THEY ALSO USE SATELLITES TO CHECK ON THE ENVIRONMENT

THERE SHE GOES AGAIN TALKING ABOUT HER ASTRONAUT UNCLE

YOUR UNCLE IS RIGHT. SCIENTISTS USE A COMBINATION OF MEASUREMENTS BY SHIPS, BUOYS AND SATELLITES TO UNDERSTAND WHAT IS HAPPENING TO OUR SEAS, OCEANS AND ATMOSPHERE

Did you know?

Environmental monitoring from space provides us with crucial information on vegetation, ocean currents, water quality, natural resources, atmospheric pollutants, and greenhouse gases. It allows us to better predict the effects of climate change in different regions and countries.

What are we doing?

European industry is building satellites that keep track of changes in sea levels with very high accuracy of only a few millimetres. The satellites record changes in ice coverage in the Arctic, in ocean currents, and in temperature. They also help monitor deforestation.

GOOD MATCH

HI GIRLS!

OH NO, NOT THEM AGAIN

I HEARD YOU WANTED TO SEND US INTO SPACE

I'LL GLADLY SHARE A SPACE CAPSULE WITH YOU FOR 6 MONTHS YOU CAN BE MY PRINCESS AND I CAN BE THE HERO

YOU DO KNOW THAT THE GUY WAS HER BROTHER, DON'T YOU?

I WAS NEVER REALLY INTO THOSE MOVIES ANYWAY. I ALWAYS PREFERRED THE OTHER FILMS WITH THE GUY WITH FUNNY EARS

AND PAPIER-MACHÉ MONSTERS...

ANYWAY, I WOULD RATHER SPEND 6 MONTHS ON A SPACE STATION WITH A BUNCH OF ANGRY ALIENS THAN WITH YOU GUYS

**Fantastic!**

The International Space Station, the result of cooperation between the USA, Russia, Japan, Canada and Europe, is the largest object ever built in space – it's the size of a football pitch! It took over 10 years to assemble and cost about €100 billion.

**What are we doing?**

International cooperation is vital for space activities, so that humans can build spaceships more complex than any single country could do alone. Europe's contribution to the International Space Station comes from the provision of cargo ships, the Columbus laboratory and European astronauts. The EU seeks to promote better international relations by encouraging political cooperation for future robotic and human exploration of the solar system.

HI GRANDMA!

OH, HI MY DEAR!

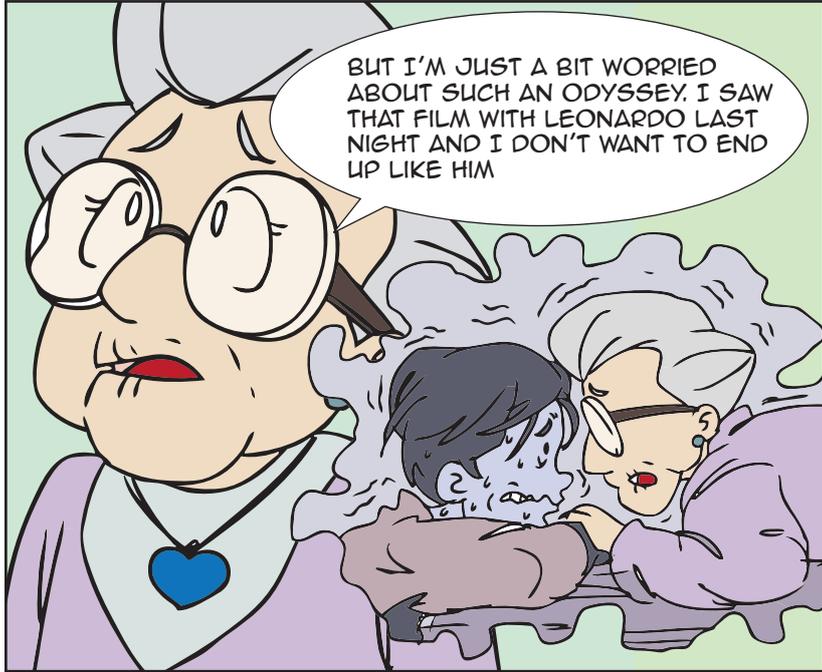

WHAT'S UP, YOU'RE LOOKING VERY SMILEY. ARE YOU SURE YOU'RE RELATED TO MY DAD?

I'M GOING ON A CRUISE ACROSS THE ATLANTIC! I HEARD IT'S A GREAT PLACE TO MEET MEN

DID NOT EXPECT THAT...

BUT I'M JUST A BIT WORRIED ABOUT SUCH AN ODYSSEY. I SAW THAT FILM WITH LEONARDO LAST NIGHT AND I DON'T WANT TO END UP LIKE HIM

DON'T WORRY SO MUCH. THEY HAVE BECOME A LOT BETTER AT SPOTTING ICEBERGS. THEY NOW HAVE PLANES AND SATELLITES ON THE LOOKOUT

I KNEW I HAD TO TALK TO YOU BEFORE TELLING YOUR PARENTS

Did you know?

Huge icebergs break off ice fields in the Arctic and Antarctic each spring; the most famous ship sunk by an iceberg was the Titanic in 1912. Nowadays, with the help of satellites, very precise maps are being produced and sent to ships to help them navigate through large ice fields.

What are we doing?

European satellites provide data free of charge to ice breakers, so that they know where their help is most needed and where icecaps are the thinnest. The Baltic Sea is the most travelled sea in the world and, thanks to satellite data, maritime routes can be safely negotiated by a huge number of ships.

THAT'S SORTED THEN. WHEN ARE YOU OFF?

IN THREE WEEKS. I'M REALLY EXCITED

LUCKY YOU! YOU WON'T HAVE TO PUT UP WITH OUR FAMILY FOR A FEW WEEKS

I HAD A LOOK AT SOME VIDEOS ONLINE. IT LOOKS REALLY POSH. BLACK TIE DINNERS, BALLROOM DANCING... I AM JUST AFRAID MY OSTEOPOROSIS WILL RUIN MY TANGO SKILLS

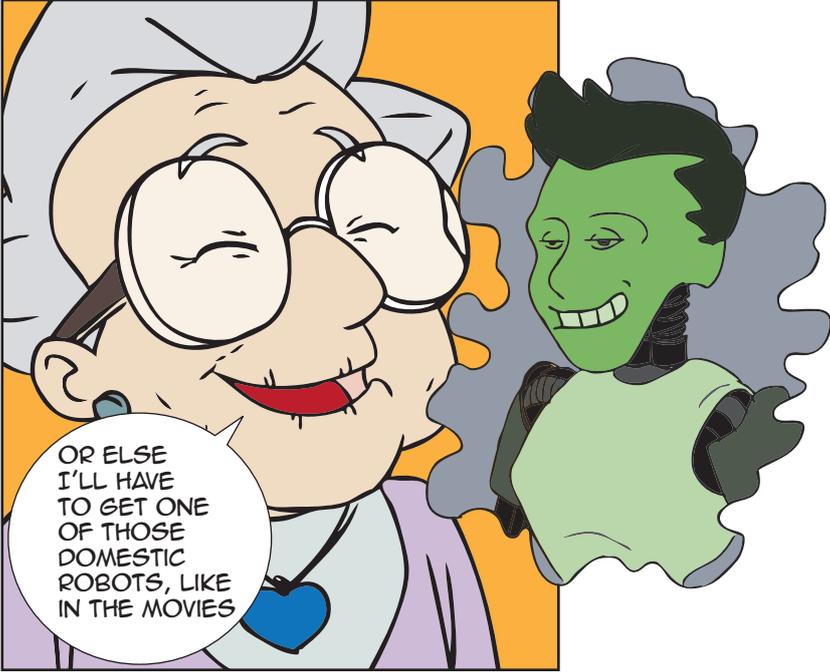

I ACTUALLY SAW A DOCUMENTARY ON TV AND THEY ARE TRYING TO FIND A CURE BY DOING RESEARCH IN SPACE. BECAUSE ASTRONAUTS ARE WEIGHTLESS, THEY CAN DO SOME FANTASTIC EXPERIMENTS

IT WOULD BE GREAT IF THEY COULD FIND SOMETHING. ALTERNATIVELY, I COULD TRY TO FIND A MAN ON THE CRUISE WHO LIKES TO LOOK AFTER THE HOUSE

FAT CHANCE...

OR ELSE I'LL HAVE TO GET ONE OF THOSE DOMESTIC ROBOTS, LIKE IN THE MOVIES

**Did you know?**

Scientists use the International Space Station to create new technologies to better understand our world. Space technology spin-offs are everywhere (in car airbags, aeroplane engines, etc) and can even help us understand and cure health problems like osteoporosis.

**What are we doing?**

ESA helps companies create new products derived from space technology that can be used in our daily lives. Experiments are performed in space, but also in Antarctica, in special 'spacecraft' on Earth, and on aeroplanes.

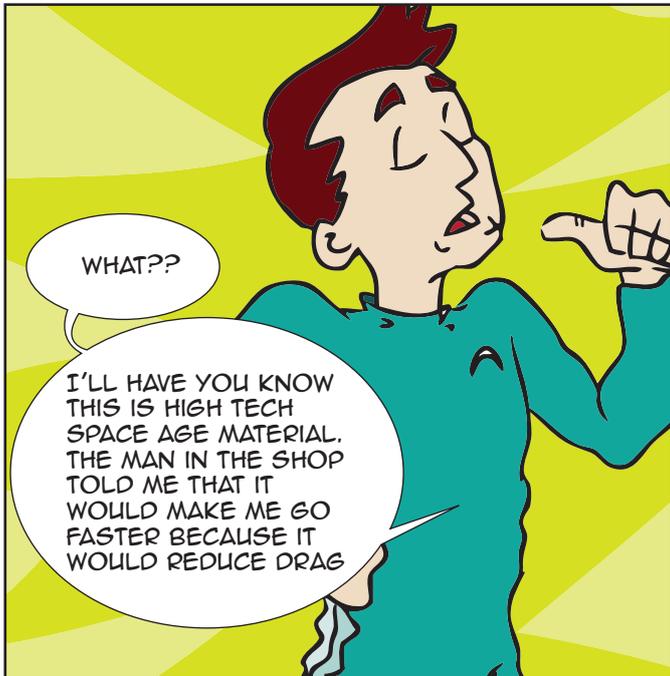

HI DAD, WHERE ARE YOU GOING?

WE HAVE DECIDED TO GET IN SHAPE. WE'RE OFF JOGGING

WHY ARE YOU DRESSED LIKE A SCI-FI CHARACTER?

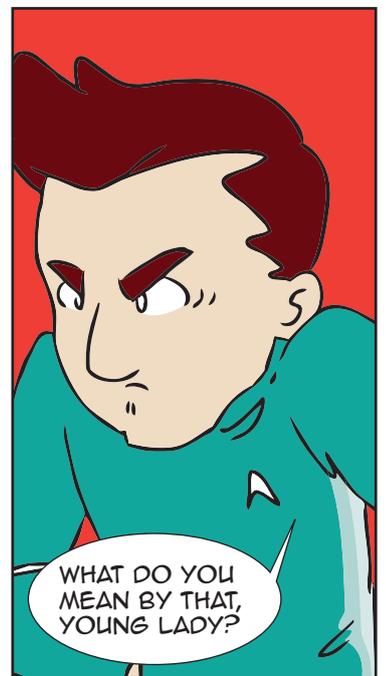

WHAT???

I'LL HAVE YOU KNOW THIS IS HIGH TECH SPACE AGE MATERIAL. THE MAN IN THE SHOP TOLD ME THAT IT WOULD MAKE ME GO FASTER BECAUSE IT WOULD REDUCE DRAG

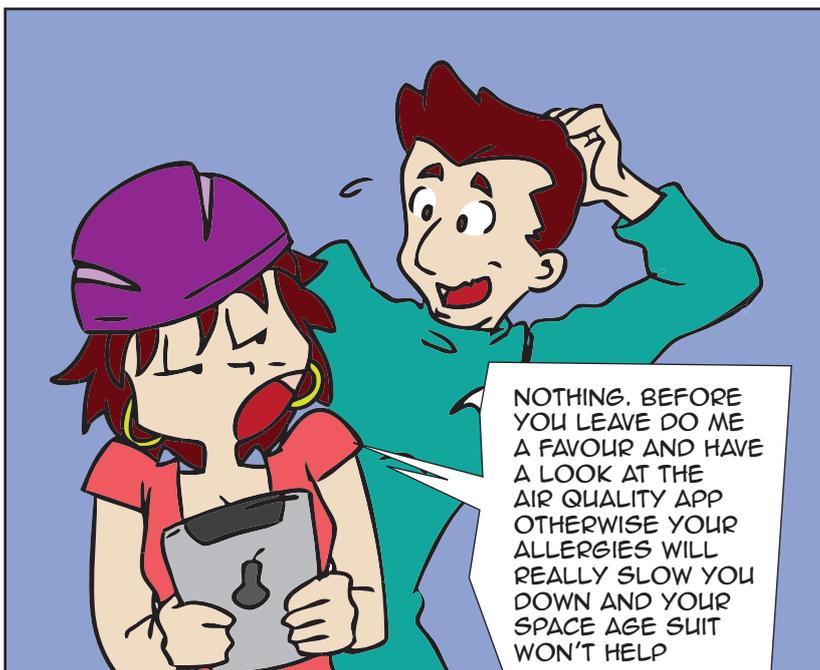

WHATEVER. I DON'T THINK THAT IN YOUR CASE IT WILL MAKE MUCH OF A DIFFERENCE

UNLESS IT ALSO HAS A TRACKER AND A MEDICAL MONITOR!

WHAT DO YOU MEAN BY THAT, YOUNG LADY?

NOTHING. BEFORE YOU LEAVE DO ME A FAVOUR AND HAVE A LOOK AT THE AIR QUALITY APP OTHERWISE YOUR ALLERGIES WILL REALLY SLOW YOU DOWN AND YOUR SPACE AGE SUIT WON'T HELP

### Did you know?

Allergies due to pollens in the air are becoming more and more of a public health burden. The rate of asthma is increasing mostly in young children because of the combination of allergens and other air pollutants.

Different space-derived technologies can now be integrated, making it possible to record jogging routes and monitor basic medical parameters.

### What are we doing?

European satellites help evaluate air quality. Sensitive individuals can find out the level of air allergen risk a few days in advance thanks to space-based weather and pollution prediction, together with pollen occurrence probability.

All these services are possible thanks to the combination of space and non-space applications.

### Did you know?

'Science of space' answers all kinds of questions about the origin of life and our place in the universe, ranging from fundamental physics of particles and forces, to observing giant galaxies and looking for asteroids and meteorites that could collide with the Earth.

### What are we doing?

ESA's comet chaser Rosetta has started its space travel in 2004. It has already flown by asteroid Lutetia and will land a probe on a comet for the first time ever in 2014. Detailed automated scientific experiments will be conducted to understand the composition of this comet called Churyumov-Gerasimenko. Already 25 years ago, the Giotto probe swept within 600km of Halley's Comet, obtaining the first close-up images of a comet.

The EU is currently financing research on potential methods to avoid collision of asteroids with the Earth.

21:00

WHY ARE YOU WATCHING THIRD DIVISION WOMEN'S FOOTBALL FROM FAROE ISLANDS?

IT'S A HIGHLY COMPETITIVE LEAGUE

I CAN SEE THAT...

WHAT HAPPENED? WHERE'S THE SATELLITE SIGNAL?

MAYBE A BIRD PUT A NEST ON THE ANTENNA AGAIN

OR MAYBE MARTIANS ARE ATTACKING US!

DAD, PLEASE, STOP BEING SUCH A DRAMA QUEEN. LET ME CHECK THE WEBSITE OF THE CHANNEL

AHA, IT SEEMS THERE ARE SOME ISSUES BECAUSE THE SATELLITE GOT DAMAGED BY A SUN STORM OR SPACE DEBRIS

THEY SHOULD REALLY PUT 'NO LITTER' SIGNS UP THERE

Did you know?

There will be more than 1,000,000 pieces of space junk bigger than 1 cm orbiting the earth by 2020, all travelling at 8km/second. At that speed, even a small screw can completely destroy a satellite.

In our daily lives, we all make constant use of satellite communications. Just think of telephones, the internet, online banking... or how much you enjoy watching live sport from around the world!

Amazing!

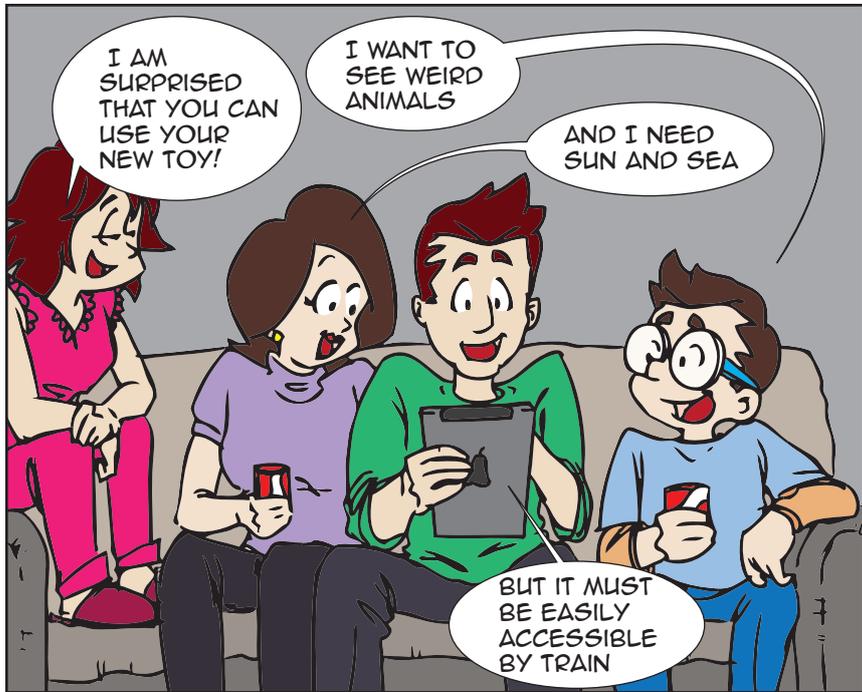

More than 3,000 TV broadcast channels are available via European satellite operators!

What are we doing?

The new generation of telecommunication satellites that ESA is developing is able to handle more than a billion voice calls or transmit hundreds of TV channels at a time. Thanks to this advanced technology, European telecom providers are world leaders.

LET'S DECIDE ON OUR NEXT HOLIDAY DESTINATION

I AM SURPRISED THAT YOU CAN USE YOUR NEW TOY!

I WANT TO SEE WEIRD ANIMALS

AND I NEED SUN AND SEA

BUT IT MUST BE EASILY ACCESSIBLE BY TRAIN

WHATEVER, AS LONG AS THERE IS A CLUB NEARBY

ANYWAY, ENOUGH EXCITEMENT FOR THE DAY. I'M GOING TO BED

GOODNIGHT DEAR!

**Did you know?**  
Most online maps and itineraries are based on satellite imagery. In addition, raw space imagery can be processed in many ways, for example to decide on future motorways, preferred housing areas, preservation of small ecosystems or sewage management. It can even be done in 3D! It's also useful for long-term planning of resilience measures, such as protecting against sea erosion, flood zones or heat waves in big cities.

**What are we doing?**  
Satellite imagery is either sold or given to small companies that specialise in satellite-based services. This highly skilled economic activity is expected to grow rapidly in the coming years, especially for decision-making in land use, urban development and all kinds of risk prediction.

# WHAT ABOUT THE FUTURE?

The surface of our planet has a rather complex biosphere. It is characterised in recent history by the dominance of the human species and our peculiar infatuation with technology. Hence, we have become unavoidably dependent on science and technology due to significant population growth, globalisation, an ageing population, urbanisation, scarcity of resources, relations between individuals and between humans and nature, and the way that we organise our societies in general.

According to several estimates, by 2050:

The world population will have increased by  
**2 billion**  
mostly in Asia and Africa.

Source: OECD (environmental outlook to 2050)

**70%**  
of people will live in cities, so in the coming decades, the equivalent of a city of 1 million inhabitants will be created every week.

Source: UN-Habitat

The number of people over 80 will have reached  
**400 million**

Source: WHO

There will be over  
**150 million**  
'climate refugees', mostly due to the rise in sea levels.

Source: International Organization for Migration

The number of cars will have doubled, reaching  
**2 billion**

Source: OECD; International Energy Agency

Imagine the consequences just on resources like clean water, food and energy!

## Can space technology help? It is rocket science after all!

Space technologies will be increasingly needed to address a wide variety of societal challenges. Anticipating such challenges and their possible scientific and technological solutions will be key for the EU. After all, the wellbeing of citizens on a healthy planet is what matters most.

## What can you do?

Wouldn't you like to play a part in this? Why not consider a career in science or technology and help shape a better future?

Remember, the Earth is your space too...

## WATCH THIS SPACE!

Go to our website to find more fun material and test what you've just learned – games, videos, posters, links... You can also find an electronic version of this comic so you can share it with your friends!

On our website, you'll find which sci-fi films and TV series were referenced in the comic. Check if you found them all!

<http://ec.europa.eu/enterprise/your-learning-space>

## DO YOU WANT TO EXPLORE EVEN FURTHER?

Ask your teacher to tell you more about each of the topics in this comic. You can then talk in class about general issues such as climate change, pollution, transport, resources (energy, food, water, land and oceans), health, safety and security, development aid, etc.

### IN ADDITION, MANY TOPICS ARE SUITABLE FOR LESSONS IN:

**Geography:**

Weather conditions, volcanoes, landslides, earthquakes, urban mapping, agriculture and harvest prediction, pollution monitoring, green energies, diseases and environment, climate change consequences, etc.

**History:**

Extinction of dinosaurs, history of space flight in the Cold War context, old and new 'space powers', etc.

**Physics:**

Speed, acceleration, angular velocity and kinetic energy, gravity, orbits, vacuum, air friction, atomic clocks, electromagnetic spectrum for astronomy, wavelengths for remote-sensing instruments, etc.

**Biology:**

Origin of life, gravity and evolution of living organisms, conditions for life, effects of weightlessness on humans, etc.

**Chemistry:**

Formation and reactivity of ozone (O<sub>3</sub>), pollutants from industry (SO<sub>2</sub>) or cars (NO<sub>2</sub>), etc.

**Mathematics:**

Exponentials in rocket acceleration, angular velocity of satellites, etc.

**Philosophy:**

Possible life forms on exoplanets: are we alone in the universe?

**Ethics:**

Should we use resources from outer space (e.g. asteroid mining)?  
Are we facing a technology divide?

**Languages:**

Why not read the comic in one of the other 23 available languages?

# USEFUL LINKS

## Getting in touch with the EU

### ONLINE

Information in all the official languages of the European Union is available on the Europa website: <http://europa.eu>

### IN PERSON

All over Europe there are hundreds of local EU information centres. You can find the address of the centre nearest you on this website: <http://europedirect.europa.eu>

### ON THE PHONE OR BY MAIL

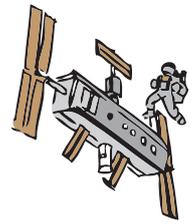

Europe Direct is a service which answers your questions about the European Union. You can contact this service by freephone: [00 800 67 89 10 11](tel:0080067891011), or by payphone from outside the EU: [+32 22999696](tel:+3222999696), or by electronic mail via <http://europedirect.europa.eu>

### READ ABOUT EUROPE

Publications about the EU are only a click away on the EU Bookshop website: <http://bookshop.europa.eu>

# MEET SOME OF OUR EUROPEAN SCIENTISTS AND EXPLORERS

Anne Glover (UK), Claudie Haigneré (France), Frank De Winne (Belgium) and André Kuipers (Netherlands) all studied and followed different careers in science, which led them to the fascinating jobs they now have.

Studying science offers many fantastic and creative career prospects and means you contribute to a better future!

As you can see, our four European scientists also like Elena's adventures...

Frank studied engineering. In the course of his career, he has been an engineer and experimental test pilot. He is also a General in the Belgian Air Force and was the Commander of the International Space Station in 2009.

André studied medicine. As an ESA astronaut, he performed a lot of scientific experiments in space and currently holds the European long-term spaceflight record of 194 days.

Anne studied biology and now has a very important job in the EU as the First Chief Scientific Advisor to the European Commission President. She is one of our best science ambassadors and is also passionate about space.

Photo: European Union

Claudie studied medicine and neurosciences. As an astronaut she flew on board the Russian Mir space station and the International Space Station. As a decision maker she was French Minister of Research and New Technologies and then Minister of European Affairs. She is now the president of Universcience.

# ALL U NEED IS SPACE

Photo: European Union

Antonio Tajani, Vice-President  
of the European Commission

*"Space is not just about adventurous space travel of robots and humans, or studying astronomy and astrophysics. It can also be very down to Earth!"*

*"The European Commission, European Space Agency and several national programmes are developing more and more space applications that can be used in our daily lives."*

You'll find many examples in this comic by joining Elena and her family and friends in their activities in the course of a 'normal' day.

Follow Elena and enjoy the trip!

Go to our website <http://ec.europa.eu/enterprise/your-learning-space>.

You'll find lots of fun material to test your knowledge!
